E-Cell IIT Guwahati x Ai Palette

A SQL-driven, consumer-aware pricing framework for the high-protein snack launch
Prepared for: Founder, D2C Nutrition Brand Launch Team

Basis: 46,929 cleaned transactions • 5,000 consumers • 6 categories • 8 states

From guesswork to a data-backed launch price

We analyzed 46,929 cleaned transactions to replace intuition with evidence. Demand is highly price-elastic between \$10–\$25 — the exact zone the new range will likely launch in — so the entry price matters more than any other lever.

RECOMMENDED ENTRY BAND
\$19.99

Sits just below the steepest demand cliff
(–55.6% at \$20)

PREMIUM CEILING (P75)
\$25–35

Trend-aligned SKUs sustain pricing here

MOST PRICE-TOLERANT CHANNEL
App (+3.3%)

Gym Kiosk close behind at +1.1%

PERSONA PRICE SPREAD
< 1%

Personas barely differ on avg price paid

THE CORE TRADE-OFF

\$100+ transactions are only 6.2% of orders but drive 26.9% of revenue — the single highest-yield bucket in the dataset. Launching too low protects volume but caps revenue per category; the memo below shows exactly where each category and persona can move up safely.

Revenue and volume pull in opposite directions

Under-\$10 tier: volume trap

23% of transaction volume generates just 5.9% of revenue. Heavy promotional/sample pricing here is not a growth lever.

\$100+ tier: revenue engine

Just 5.9% of volume returns 26.9% of revenue — a +21pt revenue-to-volume gap, the widest of any bucket. Premium SKUs (Supplements, bundled packs) belong here.

\$19.99 is the line — demand breaks hard above it

THE CLIFF

\$19 → \$20

Units sold drop 55.6% crossing this single dollar — the sharpest one-step break in the entire dataset.

INELASTIC SAFE ZONES

\$0-10 band — entry pricing has room ($E \approx +0.92 / -0.02$)

\$25-30 band — a pocket of tolerance before the next cliff

Personas don't differ on price — context does

Fitness, budget, premium, and casual buyers pay within 1% of each other on average (\$30.06–\$30.34). Persona alone is not a reliable pricing lever — segment by channel, occasion, and geography instead.

Persona	Avg price paid	Median	P90 ceiling	Consistency (σ)
Casual	\$30.34	\$16.86	\$69.84	33.54 (wide)
Budget	\$30.26	\$17.09	\$68.07	33.05 (wide)
Premium	\$30.08	\$16.96	\$66.70	32.76 (wide)
Fitness	\$30.06	\$16.93	\$68.05	32.89 (wide)

All four personas show high std. deviation (~33) relative to their average — meaning each segment spans a wide acceptable price range. Flexible, tiered pricing within a category works for everyone; rigid persona-based price walls do not.

Implication: design 2–3 price points per category (entry / standard / premium pack) and let buyers self-select, rather than building separate persona-priced SKUs.

Income overlay: a secondary lever

Bracket	Avg price range	WTP index
High income	\$30.5–31.2	WTP index 94–99
Medium income	\$29.9–30.7	WTP index 94–99
Low income	\$28.5–29.9	WTP index 94–99

High-income budget-persona buyers pay \$31.23 — more than any other income×persona cell. Income explains more spread than persona label does.

Recommendation: don't price by persona badge. Price by channel + occasion + income-correlated context (below).

Where pricing power actually comes from: channel and trend claims

CHANNEL PRICE INDEX (100 = average)

TREND-CLAIM PRICE PREMIUM (\$ vs. category avg)

App and Gym Kiosk are premium-tolerant, captive channels — launch top-end SKUs and limited bundles there first. Marketplace is comparison-shopped, so lead with entry price points there. Stack a strong trend claim (keto, vegan, low-sugar) onto any SKU sold through a premium channel to defend the higher price.

Where and when to flex price

STATE PRICE INDEX

STATE	INDEX	AVG PRICE
Colorado	107.7	\$32.05
New York	107.5	\$31.99
California	104.4	\$31.07
Texas	93.7	\$27.90
Georgia	90.3	\$26.88

Tier	Index	Rev/order
Tier 1	104.9	\$121.44
Tier 2	105.3	\$129.04
Tier 3	89.9	\$120.44

Tier 3 buyers pay 10–15% less — price entry SKUs ~10% below Tier 1/2 list price for Tier 3 launch markets to protect volume.

Best-paying occasion per persona

- Budget → Marathon-prep (+\$1.05)
- Casual → Gym (+\$2.32)
- Fitness → Late-night (+\$0.74)
- Premium → Religious-fasting (+\$1.69)

Premium above the persona's own average. Time limited-edition / bundle offers around these occasions.

Read this as: Colorado, New York, and California buyers pay 4–8% above the national average — the natural launch markets. Tier 3 cities need an entry SKU priced ~10% below the Tier 1/2 list to avoid the volume drop-off seen at higher price points.

Recommended launch prices by category

Tier 1/2 markets, blended across persona and each persona's best-paying occasion. Full persona × city-tier breakdown in the SQL codebase (Deliverable B).

Category	Recommended Price	Premium Ceiling (P75)	vs. Competitor	Positioning
Supplement	\$47.02	\$57.94	+48.5%	PREMIUM
Meal Replacement	\$38.91	\$52.99	+19.7%	PREMIUM
Protein Shake	\$33.62	\$38.88	+4.4%	COMPETITIVE
Protein Bar	\$31.52	\$30.63	-2.5%	COMPETITIVE
Electrolyte Drink	\$24.03	\$28.28	-25.4%	UNDERPRICED
Healthy Snack	\$21.37	\$25.39	-34.7%	UNDERPRICED

Read this as: Electrolyte Drink and Healthy Snack are priced 25–35% below competitor average — there is direct room to raise without losing the underpriced positioning. Supplement and Meal Replacement already sit at a premium and should lean on trend claims (keto, vegan, low-sugar) to defend that gap, not push further without justification.

Four moves for the launch

01

Anchor entry SKUs at \$19.99

Stay just under the \$20 demand cliff; do not cross it without a clear value justification (bundle, trend claim).

02

Tier by channel, not persona

Launch premium/limited SKUs on App and Gym Kiosk first (+3.3% / +1.1% tolerance); lead Marketplace with entry pricing.

03

Lead with keto, vegan, low-sugar claims

These three claims carry the strongest verified premiums (\$3.53–\$8.10 above category average) — feature them on premium SKU packaging.

04

Raise Electrolyte Drink & Healthy Snack

Both sit 25–35% under competitor average with inelastic demand at the low end — the clearest immediate margin opportunity.
